DP6

THE HORROR THAT COMES FROM THE OCEAN DEPTHS

You are responsible for the safe returning of your crew aboard the DP6, a soviet capsule sent to explore the unknown depths of the Mariana trenches. The mission was a success, but they had gone too far down, and they weren't alone...

Place as many of your scientists inside the escape pod as fast as possible while trying to avoid the bizarre Abomination, and do so before your opponents. The person who gets to save the greatest number of scientist is considered the winner.

DP6 brings a fresh approach to the Cthulhu Mythos by placing it in a soviet cold war context.
